

TR4Programmable Universal Trigger Module

Instructions

Description

The TR4 Universal trigger module accepts a voltage as low as low as 0.8V and provide a 1 second delay, then provides a 12V turn-on lead. This accessory can be used to provide a delayed turn-on signal for virtually any installation need.

Wiring

Yellow: Constant + 12V Black: Chassis ground

Green: Low voltage input (+)

Blue: +12V output
