

BACKZONE Pro

By Rostra

Introducing **BackZone Pro (250-1903-BZPRO)**, Rostra's latest innovation in vehicle parking assistance systems. Developed specifically for passenger cars and designed around the reliable components that customers have come to expect from the BackZone name, BackZone Pro advances the usability of the product line by easing installation and providing options for audio-visual or audible-only object detection alerts through the included dashboard or visor mountable display or a standalone buzzer. Key features of this new system include the following:

Smaller Audible/Visual Display

Compared to Rostra's standard BackZone Plus and FrontZone parking assistance systems, the BackZone Pro includes a dashboard/visor mount display with a smaller overall footprint designed to more seamlessly blend into a vehicle's interior.

Sun visor-mountable with on-screen alerts rotated to match.

Extended Sensor Leads

17.5" leads on each ultrasonic sensor means it is easier to connect the weather-proof ends of the sensors to the extension harness on any vehicle.

Flush-Mount Ultrasonic Sensors

Stylish, low-profile, paintable ultrasonic sensors allow you to keep the factory fit and finish of your vehicle while adding an extra dimension of driving safety.

Full-Color Retail Packaging

Every BackZone Pro system ships with full-color retail packaging. This box design acts as a "silent salesman" in your showroom detailing the myriad features of the BackZone Pro system. Likewise, the box was redesigned with warehouse distributors in mind providing ample blank panel space for multiple UPC label sizes allowing easy storage and quick retrieval from a warehouse.

BackZone Pro Retail Packaging
